Suppliers of Intelligente Sensorsysteme Dresden GmbH

Subject: **i2s sustainability activities**

Dear Business Partner,
Dear Sir or Madam,

as an Amphenol Corporation company, we are committed to our social and environmental responsibilities. We have clearly described the rules on business ethics, working conditions, human rights and environmental sustainability in our i2s Code of Conduct. For our suppliers as well as for their subcontractors and suppliers, our expectations are formulated in the Supplier Code of Conduct. This includes, among other things, a commitment to environmental protection and sustainability to better protect our planet for future generations.

We would like to inform you that i2s has set itself the goal in its environmental program, among other things, of reducing CO2 emissions and becoming climate-neutral by the year 2039. However, achieving the goal of 100% sustainability can only succeed with the full support and cooperation of our suppliers along the entire supply chain. We firmly believe that this focus will benefit society, future generations and each of us individually, and contribute to our competitive advantage in the global marketplace.

Common principle of sustainability

We expect our suppliers to share these beliefs and with your support in these supply chain activities, together we will have a significant positive impact on reducing overall emissions and achieving sustainability goals in our industry.

Environmentally compatible products and processes

We expect our suppliers to assess and minimize the environmental impact of their products and processes throughout their life cycle to ensure that damage to the environment is avoided or minimized. By switching to environmentally friendly materials, including the use of recycled and recyclable materials, waste generation should be minimized. Existing resources such as water and energy should be used efficiently. The generation of energy from renewable sources and/or resources should be sought in order to reduce the generation of greenhouse gases. Strive to be an environmental leader in the regions in which you operate.

Guiding principles of our customers

Global automotive manufacturers formulate their expectations of suppliers in the Guiding Principles for Supply Chain Sustainability.

Based on the principles, the Global Automotive Sustainability Practical Guidance provides a practical explanation of what automotive companies mean by each expectation and examples of how the expectations can be met. We therefore encourage our supplier's management to take advantage of the AIAG training on supply chain sustainability. This training is free of charge and can be accessed at the following link:

<http://www.aiag.org/corporate-responsibility/supply-chain-sustainability>

For further guidance on i2s environmental policy and objectives, please see the link to our homepage:

We thank you for commitment and look forward to continue working with you.

Sincerely yours,

Dresden, 06.12.2021
